FORWARD

The trade and investment sector plays a pivotal role in propelling Kenya's economic growth and development. Investment acts as a catalyst for trade by providing essential capital to businesses engaged in production and trade in goods and services, along with financing to meet operational and working capital requirements. Additionally, investment drive innovation, research and development of untapped opportunities and markets across countries. The synergy between trade and investments is instrumental in bolstering economic growth, creating job opportunities, and facilitating the exchange of goods within and outside the country, ultimately working towards elevating incomes and reducing poverty.

The County Governments' initiatives align with broader frameworks, such as County Integrated Development Plans and Spatial plans, which are guided by the national vision and plans. To effectively address societal needs and harness untapped County Investment opportunities, it is essential to strengthen engagement and collaboration, by positioning counties as attractive investment destinations.

Further, growing economic disparities between counties stem, in part, from uneven and uncoordinated investment efforts driven by both levels of government and the private sector. therefore, by redirecting finances and generating incentives for targeted private investment, makes it possible to foster sustainable development and narrow the economic gap. This requires heightened awareness of County Investment Plans and resources, coupled with stronger regulations and industry-specific targets, as well as the promotion of inter and intra-County collaboration. This handbook therefore, is timely to address the incognizance of investment gaps, while profiling and marketing the untapped investment opportunities.

The Joint County Bankable Investment Projects Handbook presents an extensive overview of investment opportunities across the 47 County Governments in Kenya. The handbook presents a visionary roadmap of the key priority projects and the untapped opportunities. The handbook incorporates investment opportunities across sectors, including Agriculture; Trade, Industry and Cooperatives; Tourism and Hospitality; Health; Water and Natural resource; Education; Blue Economy; Land, Infrastructure and Energy sectors. These key investment prospects span up to a period of 5 years and it aligns with the county development frameworks and national vision and agenda

The handbook serves as a valuable tool to attract investors from Kenya and beyond. By doing so, it paves the way for the establishment of industries, creation of more job opportunities, and generation of additional income for citizens across the counties. Therefore, let us embrace this County Bankable Investment Handbook as a guiding beacon towards a brighter future, where opportunities abound and success knows no bounds.

H.E Anne Mumbi Waiguru, EGH
Chairperson, Council of Governors

ACKNOWLEDGEMENT

The Council of Governors (COG) extends its appreciation to all those who participated in the development of this joint County Bankable Investment Projects Handbook. The development of this handbook was a deliberate effort of the Council of Governors, County Governments, National Government and the private sector among other key sector stakeholders. In this regard, the Council wishes to single out the immense contribution from the following: Firstly, the County Executive Committee members for Trade, Industry and Investments and County Executive Committee members for Economic Planning and Finance who through their caucuses provided inputs on the County Investment opportunities and projects for consideration in the development of the handbook.

Secondly, the County Chief Officers and County Directors for respective departments who readily provided inputs during the mapping out of the investment opportunities.

Thirdly, the handbook has also benefited inputs from various forums that the COG has convened with the stakeholders including during the induction for the sector County Executive Committee Members and inaugural meetings with the Committee leadership. These have been instrumental in interrogating investment opportunities, programmes and projects available in counties.

Fourthly, inputs from the private sector who greatly contribute to the investments and development of trade sector through provision of enhanced value chains. Special appreciation to the Kenya Private Sector Alliance, Kenya National Chamber of Commerce and Industry, and Kenya Association of Manufacturers for their immense contribution in enriching the handbook.

In a special way, the Council of Governors would like to express special gratitude to Embassy Kingdom of the Netherlands for their financial support towards the printing and the launch of Joint County Bankable Investment Projects Handbook.

Finally, I wish to appreciate the efforts of the internal technical team that worked tirelessly to ensure the handbook is completed and up to standard. Specifically, I thank Mr. Haron Ngéno, Ms. Mukami Kibaara and Ms. Naomi Shalli.

In conclusion, I would like to note that the ultimate goal of the handbook is not only to facilitate county interaction with the private sector and partners, but also to position counties as investment destination and to spur economic growth.

H.E Hon. Wavinya Ndeti

Chairperson Trade, Industry, Manufacturing and Enterprise Development Committee

Council of Governors

1. INTRODUCTION

The Constitution of Kenya provides the basis for County Governments to enhance economic growth and development. The act of devolving key functions in Kenya lays a foundation for revolutionizing Local Economic Development (LED)¹ in the country. The functions and powers of the County Governments as set out in the Fourth Schedule include among others trade development and regulation targeting markets, trade licenses, fair trading practices, and cooperative societies. With the transfer of resources and functions, Counties contribution to the national economic grid has been evident over time.

The classical theory² dictates that the extent to which a country produces and conduct trade depends on the country's production factors; land, labor, and capital. The production is largely as a result of investments. As envisioned in the National Blueprint Kenya Vision 2030, investment both domestic and foreign influences economic growth and development through creation of jobs, promotion of technological innovation and development of new skills. This has the potential of transforming the country into an industrialized middle-income country providing a high-quality of life to all citizens by 2030.

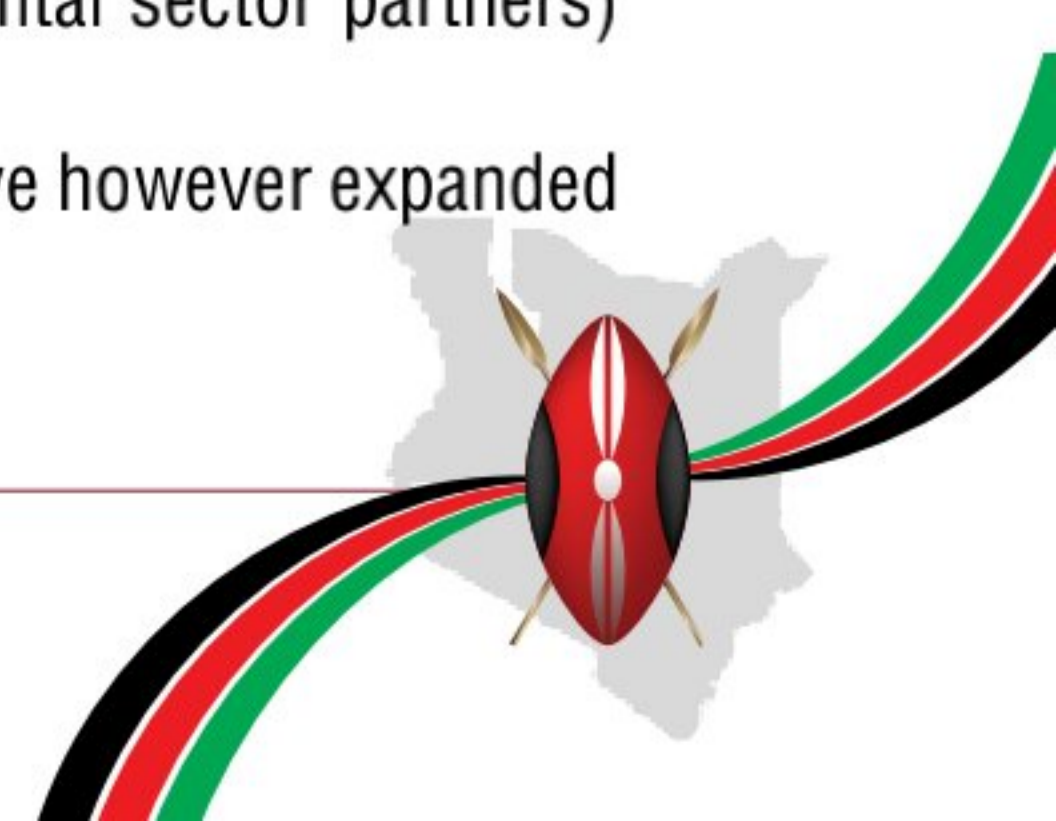

At the County level, the County Integrated Development Plans (CIDPs) are a five-year period development plans prepared by County Governments to guide their economic and development goals. The county specific local economic development strategies and activities are embedded in the CIDPs which complement the national priorities and aligns with the National Vision 2030 and the Medium-Term Plans (MTPs). Further, the CIDPs are also informed by the local priorities as demanded by the communities. Therefore, the Local Economic Development plans and opportunities combine the national development agenda and the community priorities. In addition, both national and county government adheres to constitutional requirements of organizing a well-structured stakeholder involvement to gather views and development priorities from the counties. In some instances, the professionals at the community level are included in a sector sitting to deliberate on the relevant priorities. Therefore, these development priorities are implemented according to local interests and priorities.

The role of government is critical in actualizing the set development plans. The two levels of government have a mandate of providing and maintaining a conducive business environment at the local level to attract, retain and grow local, regional and international investors. In addition, the governments are in the verge of intensifying the priorities on value addition and diversification of economic activities through select flagship projects with an aim of creating employment, expanding income potentials and eliminating poverty.

1.1 Why Invest in Counties in Kenya

The Counties present untapped economic and investment opportunities based on the economic potential and resource endowment for each County. Further, the County Governments support is evident as they engage the players across the sectors to create an enabling environment by formulating investor-friendly policies and regulations. Some of the factors incentivizing investment in counties in Kenya include:

- 1 The process of bringing together different partners (government, public, business and non-governmental sector partners) operating in a local area to work jointly to harness resources for sustainable economic growth
- 2 States that the economic growth is a factor of labour, land, and capital. The neo-classical economists have however expanded this theory by introducing technology and entrepreneurship as factors of production.

a) Strategic location of Counties

Each county has unique characteristics and its strategic location presents various untapped opportunities for investors to leverage on. The proximity to inputs such as raw materials, relatively cheap labour and low cost of operations such as land rates and rents presents a good opportunity for investors to capitalize on. In addition, easy access to key infrastructure such as roads, rail and water transport ease the movement of goods to markets, both domestic and international.

b) Improved social and physical infrastructure

The County Governments in collaboration with the private sector have facilitated access to improved quality social amenities such as restaurants, hospitals and entertainment spots. The County Governments further have enhanced their efforts in provision of public utilities (which include electric power, telecommunications, water supply and sanitation, sewerage and waste disposal); public works (which includes irrigation systems, schools, housing and hospitals); transport services (which include roads, railways, ports, waterways, airports and pipelines) and research and development facilities. These infrastructures are key in facilitating the establishment of industries and facilitation of trade.

c) Availability of County Integrated Development plans

County Governments have prepared integrated development plans and spatial plans to provide frameworks for county development activities. These plans present the medium and long-term strategies for counties, and how the counties intend to execute them including allocation of budget lines and other necessary resources. Further, the plans outline the various economic and investment opportunities and priorities available in the counties. Existence of such plans affirm county governments' commitment and support while attracting private investments.

d) Regulatory reforms in the Country

The National Government in collaboration with County Governments have intensified efforts on reforms that directly improve processes and costs associated with trade and investment. The broad range of business-related measures include; company registration, construction permits, property transfers, commercial litigation, the insolvency framework amongst others. This move aims at lowering the cost of doing business in Kenya while at the same time enabling the investors and businesses to break-even and generate reasonable profits.

e) Government - private sector engagement

The County Governments appreciate the role played by the private sector in supporting counties as investment hubs. Overtime, private sector has been supporting governments in generating new investments, employment and financing for development across the country. On the other hand, the county governments have regularly conducted policy dialogue with the private sector players through various reforms to support investment and business in counties. In the past, investment from private sector mainly concentrated in agriculture, manufacturing, construction, hospitality and horticulture sectors which have significantly stimulated the development of local SMEs and industrialization process in the country. This can be explored further to capitalize on opportunities available in the counties.

f) Natural resources discovery

Natural resources have the potential of generating revenue to County Governments. For instance, discovery of oil, natural gas, and other mineral resources present potential for exploration and exploitation of mineral resources to meet an ever-ready market. This has the capacity to raise wages, additional income and creation of additional employment opportunities. In recent past, County Governments have been supporting capacity building of artisanal and small-scale miners and associations in the counties in line with the occupational health and safety standards and provisions. These government efforts are geared towards empowering citizens to venture into mining while considering safety.

g) Availability of Public Land for Investment

The County Governments have set aside and provide land for investment and industrial parks to facilitate establishment development of industries. This move needs to be explored further by conducting public audits for all publicly available County Government lands will has the potential of hosting various industries based on their proximity to resources/inputs, labour and market.

1.2 Rationale and Justification

The County Governments initiatives to spur economic and development growth aligns with the County development frameworks such as County Integrated Development Plans and Spatial plans. These frameworks bring together different partners including national government, public, private and non-governmental sector partners) operating in a local area to work jointly to harness resources for sustainable economic growth. The County Governments are increasingly adopting partnership approach as a tool for local development and a means of ensuring that local needs and priorities are met in a sustainable way.

However, despite devolution being in existence almost 10 years, the Counties continue to experience growing inequalities in the economy. The disparities in economic growth and development have been fueled by uneven and uncoordinated investment efforts spearheaded by the both levels of government and the private sector.

Overtime, the National Government has initiated flagship projects without involvement of the host Counties. Conceptualization, mapping and identification of key projects such as industrial parks and special economic zones requires involvement of County Governments at all stages. This will ensure the projects align with the county development plans and enables counties to effectively contribute towards its success.

Recent studies and investment handbooks from various counties show that counties have untapped investment and economic opportunities. Noting the varying strengths and investment opportunities of counties, a comprehensive mapping out of these opportunities was important not only for counties to position themselves as investment hubs but also presents a basis for engaging partners, both domestic and foreign across various sectors. Further, these mapping exercise will be used to profile, zone and brand counties in line with their resource endowment and strengths for ease of pooling of resources and economies of scale.

Further, the counties need to partner with National Government and other actors to not only redirect their finances but also create new opportunities for blended financing while creating incentives for targeted private investment to drive sustainable development. Essentially, there is need to

create awareness on the potential of the County Investments plans and resources, create stronger regulation and industry-specific targets, promote inter and intra- County collaboration, put in place measures and guidelines which will be achieved both in the short term and long-term.

This will contribute to the overall national goal specially on economic pillar under Vision 2030 and Sustainable Development Goals (SDGs) of reducing poverty and improving on livelihoods. Further, the investment across the sectors will contribute to the overall county economic prosperity and improved livelihoods.

1.3 Objectives

The main objective was to develop a joint County bankable investment handbook for projects, programmes and plans domiciled in counties and provide a reference material for engagement with investors and partners. To achieve this, the following specific objectives were considered.

- i. Identify, map and document bankable investment opportunities domiciled at the Counties.
- ii. Strengthen county capacity to position and promote the bankable investment opportunities in Counties for economic growth and development.
- iii. Facilitate effective partnership and private sector involvement in county investment plans for ease in implementation

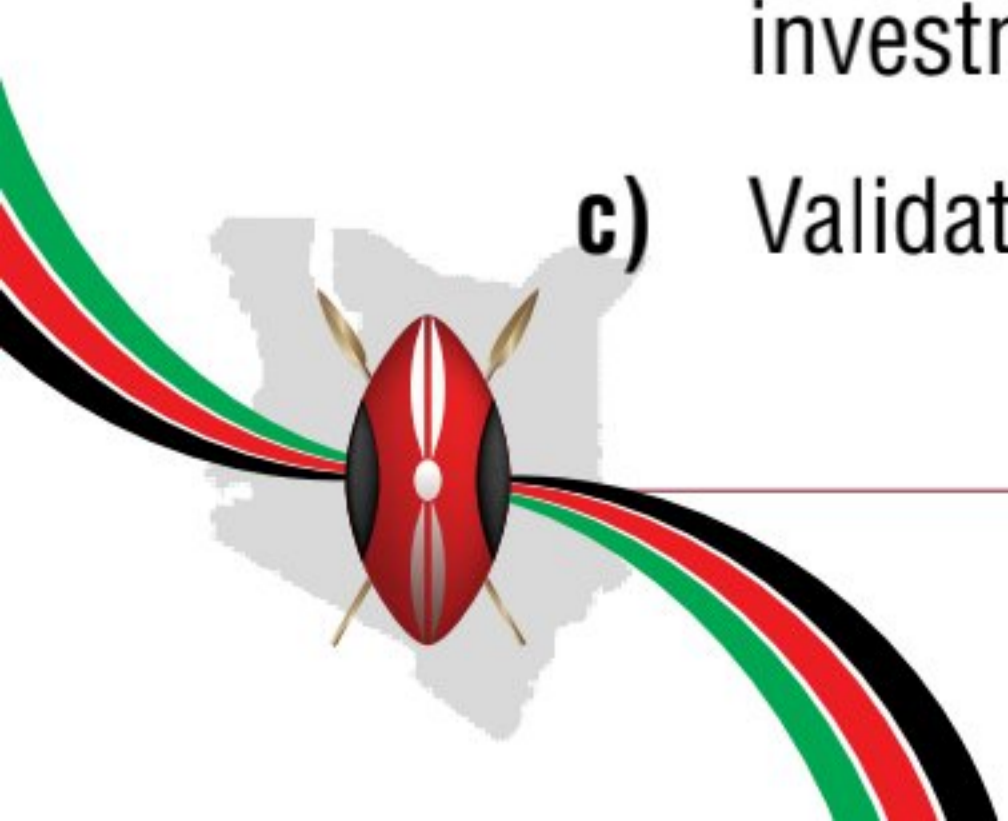

1.4 Approach

The Council of Governors adopted the co-creation and involvement of the stakeholders in mapping out and execution of investment plans at the counties. Development a joint county investment handbook for bankable investment projects was informed by the need to position counties as investment destinations. Further, the Council of Governors resolved to strengthen counties' capacity to attract, retain and enhance partnership with investors across the sectors. Therefore, this handbook will be resourceful when engaging partners and investors during conferences and workshops. Therefore, the document presents a list of profiles of bankable flagship county investment projects to be prioritized for promotion by counties.

Further, Article 6 of the Constitution provides that despite the distinct and inter-dependent nature of both levels of Government, they shall conduct their mutual relations on the basis of consultation and cooperation. Therefore, co-creation among stakeholders including National and County Government, those in research and technology and the users from the sector or policy are key for the planning to implementation phases of projects and programmes. This generates ownership, shared ambitions and provide a ground for innovative solutions, thereby ensuring uptake by the public and private sector, decision makers and society at large.

Mapping and execution of investment opportunities at the Counties was guided by the following steps:

- a) County Governments' engagement to identify and map out existing, on-going and untapped investment opportunities
- b) Documentation of information and data relating to investment opportunities at the counties. This was done through a joint county investment scan which will resulted into a joint investment handbook for Counties in Kenya
- c) Validation of investment opportunities identified by the counties.

The Joint Investment Handbook will be useful in the upcoming conferences including the Devolution conferences, to profile, brand and market the available economic and investment opportunities. Further, the handbook will also be distributed to all counties for publication in their websites and the same will also be published through the Council of Governors website and Maarifa Centre.

The primary beneficiaries of this exercise and the county investment handbook will be the County Governments, the National Government and the partners across various sectors both private sector players (domestic and foreign) and development partners. Ultimately, the handbook will facilitate counties to attract investors which will result in creation of industries, more jobs and additional incomes for the citizens.

2. PROJECT INTERVENTION AREAS

a) Agriculture

Kenya has a good climate for agricultural production and is strategically located to facilitate marketing of agricultural produce. The sector consists of crop production including horticulture; livestock keeping with both local and improved species and fisheries among others. Counties are endowed with an enormous agricultural cooperative industrial potential arising from the many industries which were handed over to co-operative institutions but have had financial and technical capacity challenges, which therefore if run efficiently can be very viable processing plants. These plants which are scattered across the counties offer immense investment opportunities for potential investors both locally and foreign investors. Some of the potential Industries in counties include: Agro-Processing of industries which include textile, fruit processing, cottage industries, honey and peanut processing, animal feed processing plant, poultry development and hatchery, fish cold storage and ice processing plants, dairy processing plants, rice processing plants, and fish feed processing plants among others.

b) Trade, Industry and Cooperative Development

Kenya is a party to various international and regional treaties, conventions and agreements which has enabled access to open and wide markets, reduced barriers to trade and improved access to quality products. Some of the key trade preferential agreements include the: African Growth and Opportunities Act (AGOA) which allows for quota free and duty-free access to the USA market for over 6,000 items produced in Kenya; the East African Community (Consisting of Kenya, Uganda, Tanzania, Rwanda, DRC, South Sudan and Burundi); 20-nation Common Market for Eastern and Southern Africa (COMESA); and the current African Continental Free Trade Area (AfCFTA) with 54 membership states. These agreements and treaties promote greater two-way or multiple-ways of trade and investment with partners across the world.

In addition, the cooperative sector is essential in promoting equity, social benefits and business sustainability among others. The sector can support small scale traders and farmers to acquire the much-needed financial support to facilitate production of inputs and trade across the counties. The sector can also catalyze value addition for agricultural produce for it to attract better market and be competitive in the trade space.

Among the programmes and projects common in the sector include:

- i. Development of Business Incubation centers to benefit the small and medium enterprises (SME)
- ii. Development of Modern market systems and market infrastructure
- iii. Provision of Business Information System including profiling of SMEs and Cooperatives.
- iv. Establishment of the County Aggregation and Industrial Parks (CAIPs) in all the counties.

c) Water and Natural Resource

Water is key to food security. Consequently, crops and livestock require water to grow. Globally, agriculture irrigation accounts for 70 percent of water use. Over time the water investment in the country has revolved around the constructions of new reservoirs, dams, treatment plants, and

water connection pipes among others. Investment in these projects is key in enhancing countries production and promotion of agri-business. In addition, the country's natural resources remain untapped. Various counties have mapped out existing and potential mineral areas in their counties, this includes:

- i. Kisii County has mapped out Kisii soap and stone and granite
- ii. Siaya County conducted a study and mapped out all natural resources in the County including sites for occurrence of Quarts Stones, Sand harvesting areas and gold potential areas
- iii. Kajiado county mapped and gazetted all marble quarries in the county
- iv. Taita Taveta County through the mining division has been collection mineral information data and mining inventory with the aim of developing County Mineral and mining geo-database through aerial geophysical surveys.

d) Education sector

The Education sector has low hanging investment opportunities in the areas sports and talent development, pre-primary, youth polytechnics and vocational training, early childhood development, youth and gender affairs in the provision of social services, including table banking for micro-economic take off.

e) Land Sector

Land is a key factor of production. The County Governments are in the processes of developing the spatial plans required to facilitate proper management of land resource and spurring economic growth. The spatial plans provide a Geographic Information System (GIS)-based lands sector audit of public land within the county. This plan provides an inventory of all public land available for investments. However, not all the counties have developed GIS-based spatial plans, a few counties are still in the process of revising physical and land use plans for various investments. This process can be hastened through public private partnerships.

f) Infrastructure and energy sectors

Some counties boast excellent weather conditions favorable for exploring and developing renewable energy ventures. From carbon trading, solar and wind energy, the county has vast reserves that can increase the energy capacity in the county whilst ensuring environmental conservation. Companies interested in venturing in solar energy production and development will benefit from energy zones that will be established within the county.

The following opportunities are available in the energy sector

- i. Solar Power Generation plants that can injected to the National Grid,
- ii. Tapping Wind Energy generation which can be injected to the national grid,
- iii. Hydro power generation
- iv. Exploring changing organic waste into energy

g) Tourism and Hospitality industry, Information, Communication and Technology Industries

Kenya's diverse beauty attracts tourists and investors from all over the world. The tourism sector is one of the Kenya's most important industry. It is characterized with strong linkages with the transport sector, retail industry, entertainment industry, and food production industry. The beautiful coastlines, amazing wildlife and rich culture are among the key attraction sites that position Kenya as a renowned tourist destination.

There are great opportunities for investments in the areas of Tourism and Hospitality industry, Information, Communication and Technology Industries. Some of them include promotion of tourism and recreation services in the Counties, investment in eco-tourism, opportunities in coastal tourism such as beach hotels/resorts specifically chain hotels, water sports activities, cruise ship, Marinas, marine conservation, and other coastal tourism related services among others.

h) Health

Investing in health systems in Kenya is an opportunity to accelerate economic development and growth through prevention of life-long disabilities, access to affordable healthcare services and reduction of premature deaths. Such investment will move counties closer to achieving objectives of national poverty reduction strategies and the Sustainable Development Goals (SDGs).

The health sector in Counties accounts the largest share of equitable share. County Governments have continued to develop laws and regulations to enable the investment in the health sector and participation of the private players in the sector. Manufacturing in the health sector often focuses on pharmaceuticals, but there are many areas beyond pharma including various kinds of equipment and supplies. For example, personal protective equipment (PPE) is a vital output of medical supplies manufacturing.

Health technology also shows great potential for investment. This has been an important area of the health sector for many years, but its prominence has increased since the COVID-19 pandemic. The gap in data collection and availability also offers an opportunity. A central compilation of data that is publicly available, even accessible with a fee, could offer the chance to benchmark, plan and forecast. An information centre could potentially be managed by private sector health associations.

i) Blue Economy

The Blue Economy in Kenya presents some of the untapped investment opportunities which has a potential of supporting country's economy. The sector employees approximately two million people directly and indirectly as fishers, traders and providers of related services. The impact of blue economy can be enhanced further through value addition of the resources by increasing investment in the sector. This will include investment in deep sea fishing, fisheries infrastructure, and related activities including investing in boat-building yards, plants to make fishing nets, engine repair and maintenance workshop, fish-processing and packaging plants, fish landings facilities, ice-making plants, cold-storage services, dry dock facilities and development of fishing and cruise ship ports.

3. EXPECTED IMPACT

The programs and projects identified have a positive impact on the transformation of the Country's economy, its sustainability and productive capacity. Precisely, these projects will have favorable effects on the country's economy, society, policy space, and the environment.

a) Structuring impact:

The projects have a potential impact on the collaborative processes for prioritization across all pertinent investment opportunities at the county level. It is anticipated that this would lead to collaborative investments to support shared activities, with the prospect of sizeable complementary contributions from the National Government and development partners. A varied and active community across scientific fields and socioeconomic areas will emerge from the Partnership.

b) Economic Impact:

The essential pillar of a sustainable economy will be informed by policies and governance designs, range of accessible infrastructures and information access, as well as educational components necessary to facilitate capacity, and skills among society and enablers. The initiatives are also anticipated to provide incentives for best practices, and pilot projects in all pertinent economic sectors.

c) Societal Impact

Societal impacts of the projects and programmes will come through informing policies that benefit citizens, job creation for the benefiting communities, and supporting fulfilment of existing obligations including poverty eradication, climate change, and sustainable economic development. The Projects and programmes will further equip society with methodologies for developing their sustainable future, such as through s spatial planning (MSP) and management tools and with direct services such as early-warning systems to support citizens' wellbeing and development potential.

Table 1: Profiles of County Bankable Investment Projects in Kenya, 2023

4. APPENDIX

Annex 1: Profiles of County Bankable Investment Projects in Kenya, 2023

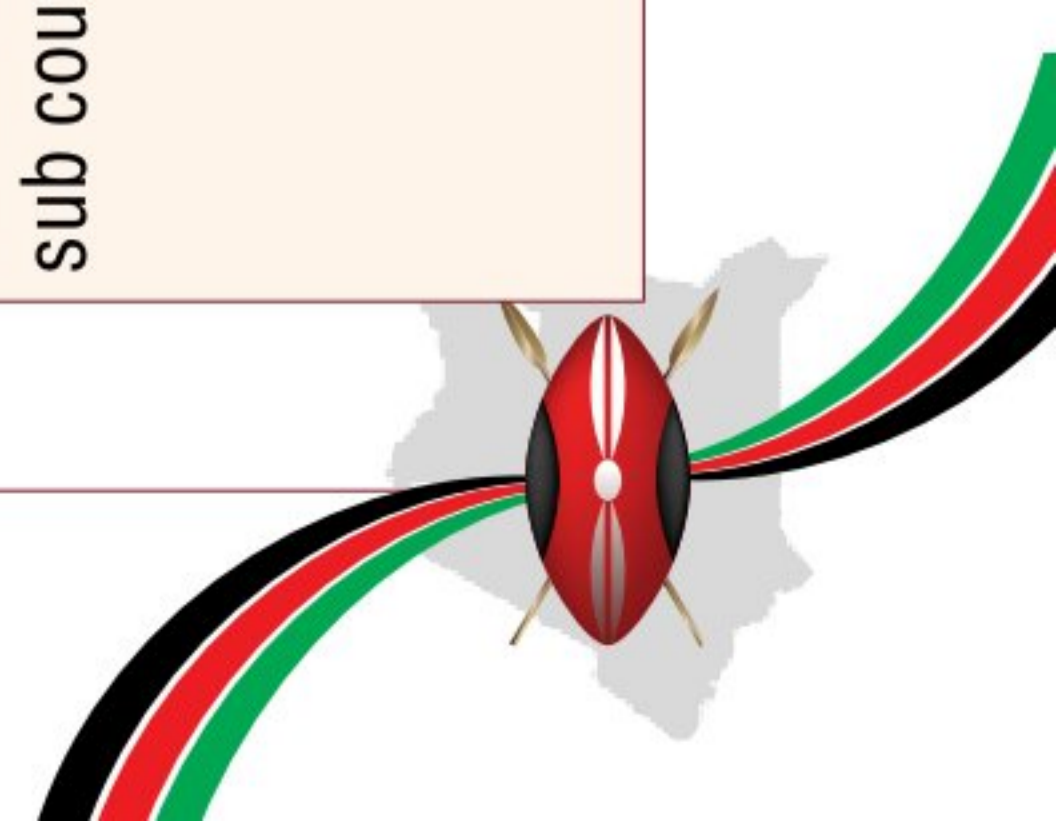

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Baringo County, Mogotio	Development of Industrial Park	Industry	Creation of employment opportunities, business and wealth growth for the people of Baringo	The county plans to have an industrial park that can attract local, regional and international businesses in all sectors. Upscaling of Mogotio tannery to achieve processing and manufacturing of leather products.	Wealth and employment creation	No	500 million	5 years	Yes. County to allocate land & collaborate with vocational training institutions. Investors to invest in the opportunities available at the park & tannery
Baringo County, Mogotio	Mogotio Hides and skins tannery	Industry – value addition	Carryout value addition for wealth creation and job creation	Completion of tannery, value addition, equipping and infrastructure development	Wealth and employment creation	No	100 million	3 years	Yes. Through budgetary allocation from the County Government and support from partners.
Baringo County, Mogotio	Commercialization of natural products (aloe vera, tamarinds, cacti, traditional herbs and vegetables)	Industry – value addition	Carryout value addition and wealth creation	Feasibility studies, identification of private investor, value addition.	Wealth and employment creation	No	300 million	5 years	Yes. Through budgetary allocation from the County Government and support from partners.
Baringo County, Tiatty	Honey Processing Plant	Industry – value addition	Carryout value addition and packaging for wealth creation	Construction of the factory, value addition and equipping and infrastructure development	Wealth and employment creation	No	50 million	2 years	Yes. Through budgetary allocation from the County Government and support from partners.

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Baringo County, Kabarnet	Cottage industry 'jua kali' park	Industry	Generate wealth and employment creation	Construction and equipping of jua kali shades. Infrastructure development	Increased no. of jua kali artisans practicing	No	250 million	5 years	Yes. Through budgetary allocation from the County Government and support from partners.
Baringo County, Marigat	Solar energy harnessing	Energy	Promote adoption and use of clean, affordable and sustainable energy	Acquisition of solar energy harnessing equipment, assembly plant for solar appliances and infrastructure Acquisition of wind energy harnessing equipment and infrastructure	Wealth and employment creation	No	100 million	5 years	Yes. Through budgetary allocation from the County Government and support from partners.
Tugen hills	Tugen hills, County wide						100 million		
Bomet County, Konoin Constituency, Embomos ward	Construction of Bosto Dam	Water and Agriculture	To increase access to clean and sufficient water for farmlands, livestock and domestic use	Construction of dam. The capacity of the reservoir will be 29.5 Million cubic meters.	Increase access to sufficient and clean water for use.	Yes	20 billion	5 years	Yes County Government, National Government and partners
Bomet County - Location subject to feasibility Study Report	Milk processing plant	Agriculture, Livestock and Co-operative Development	Increased income through livestock raring	Conducting feasibility study, Training and sensitization of Farmers, construction of the plant, equipping and operationalizing the plant.	Improved milk productivity, improved income to farmers and food security	No	500	2024	Yes County Government & Development Partners

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Bungoma County – Sang’alo	Establishment of Industrial Park in Sang’alo	Industry	Facilitate investment in the primary production, Agro-processing, & value addition facilities.	Establishment of Park in the county will benefit majority of residents, especially those producing agricultural raw materials, cottage industries and CIDCs.	Economic growth, Creation of jobs, wealth and revenues to the county. Promotion of Value Addition	No	500 million	10 years	Yes. Through budgetary allocation from the County, National Government and partners.
Bungoma County - Webuye	Dairy Processing Plant in Webuye	Trade	milk processing plant in Webuye to enhance value addition and processing in dairy.	Establishment of a Milk Processing Plant at Webuye and promotion of milk production in the county. The project will benefit 100,000 residents. Construction of Milk cooling facilities.	Creation of jobs, wealth and more revenues to the county.	No	200 million	2 years	Yes - County Government of Bungoma/ Development Partners
Bungoma County - Chwele	Establishment of Poultry Processing Plant at Chwele	Trade	Expansion and operational-ization of the Poultry for value addition & poultry meat production	There exists a poultry slaughterhouse in the county though requiring further investment to optimize its operations.	Creation of jobs, wealth and more revenues to the county.	No	100 million	2 years	Yes - County Government of Bungoma/ Development Partners
Bungoma County, Mt Elgon - Kaberwa	Establishment of a Tea Processing Plant in Mt. Elgon	Agriculture and trade	Establish a tea processing plant within the tea growing zones to post-harvest losses & allow max. benefits	Construction of a multimillion tea factory in Mt. Elgon Sub County of Bungoma County. This will minimize on the losses incurred when transporting tea to tea to neighboring counties.	Creation of jobs, wealth and more revenues to the county.	No	350 million	5 years	Yes - County Government of Bungoma and National Government

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Bungoma County, along River Sio	Sio-Sango Multipurpose Dam and Irrigation Scheme	Agriculture	To support irrigation of farmlands, production of hydropower and supply water to the residents in the county and neighboring counties	Develop viable multipurpose infrastructure and non-structural interventions for irrigation (command area of 1,700ha) livestock development, water supply, hydropower generation (325KW), flood control, fisheries & improvement/enhancement in the project area. At least 20,000 people in Bungoma and Kakamega counties will directly benefit from the project and more than 500,000 people indirectly.	Provision of sufficient water supply for irrigation, generation of hydroelectric power and domestic consumption by the households.	No	200 million	5 Years	Yes - County Government of Bungoma, development partners, and National Government
Bungoma - Across the 9 Sub Counties	Equipping and operationalization of Cottage industries	Industry	Generate wealth and employment creation	Equipping and operationalization of already existing cottage industries	Economic growth, Creation of jobs, wealth and more revenues to the county.	No	62.5 million	5 years	Yes. Through budgetary allocation from the County, National Government and partners.
Bungoma County- Across the 9 sub counties	Development of modern market stalls	Trade	Increase economic activities in the region.	Construction of modern market to survive the growing demand in the town considering its strategic location	Business environment improved, cost of doing business reduced and revenue generation enhanced	No	247.5 million	5 Years	Yes. Through budgetary allocation from the County Government and partners

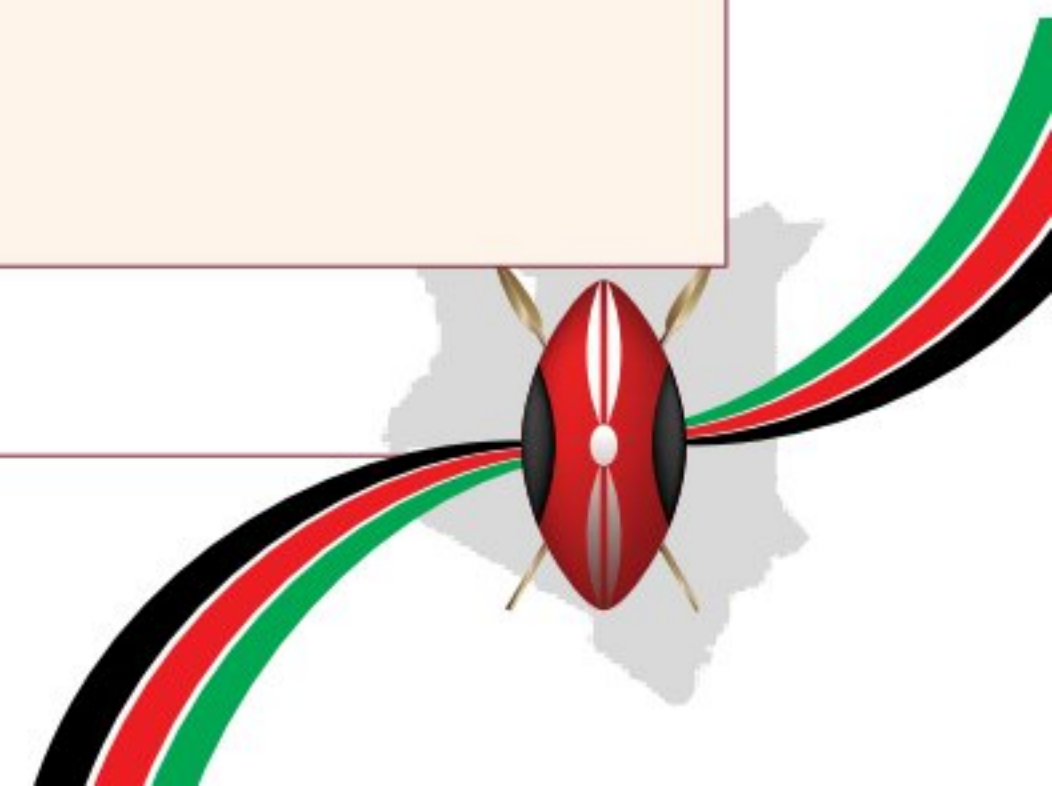

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Bungoma County- Bungoma	Develop Tier one market	Trade	To create more competitive and conducive business facilities for businesses	Establish Tier One Market to provide one-stop shopping facility for various business activities	Business environment improved, cost of doing business reduced and revenue generation enhanced	No	200 million	2 Years	Yes. Through budgetary allocation from the County Government and partners
Bungoma - Nabuyole	Establish Hydro-electric power plant	Energy	To enhance access to electricity	Construction of a hydro plant to generate electricity to be sold to the National grid.	Economic growth, Wealth and employment creation	No	400 million	2 Years	Yes. Through budgetary allocation from County Government and partners.
Bungoma -Chetambe Hills Webuye and Mt. Elgon	Establish Wind Energy Plant	Energy	To enhance access to clean and affordable energy	Construction of a Wind Energy plant	Economic growth, Wealth and employment creation	No	200 million	2 Years	Yes. Through budgetary allocation from the County Government and partners.
Bungoma – Across the 9 Sub Counties	Establish Bio Centres on major markets	Energy	To enhance access to clean and affordable energy	Construction of bio-latrines by use of standard bio-gas system designs.	Economic growth, Wealth and employment creation	No	50 million	3 Years	Yes. allocation from the County Government and partners.
Bungoma -	Establish Solar Power Plant	Energy	To provide affordable lighting equipment	Develop solar plant to generate power	Economic growth, Wealth and employment creation	No	100 million	1 year	Yes. the County Government and partners.
Bungoma County- Bungoma, Kimili and Cheptais	Establish Business Incubation Centres	Trade	To mentor entrepreneurship in the County	Establishment Centres for nurturing business innovations	Wealth and employment creation	No	60 million	3 Years	Yes. allocation from the County Government and partners.

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Bungoma County- Bungoma, Webuye, Kimilili and Kapsokwony	Establish Business Information Centres	Trade	To provide business information for start-up and on-going businesses	Establishment Centres to make the business community to be more informed of existing business opportunities, markets and knowledge.	Enhanced business knowledge, Wealth and employment creation	No	100 million	3 Years	Yes – possibility of PPP
Busia County, Teso South Sub County	Busia One Stop Agricultural Commodities Wholesale Market Hub (OSAM)	Trade	To improve efficiency in the distribution of food.	Construction of one stop wholesale market hub for agricultural commodities of all types. It will be a state-of-the-art market hub with all the services that facilitate marketing of supplies. These services include; 1.warehouses that are compliant with warehouse receipt policy 2.Digitized commodities prices system(displayed on a digitized price 3.Financial services (Banking halls); 4.Cold storage facilities (for perishable goods) 5.Business information centre etc.	1.Efficiency in food distribution 2.Increased household income 3.Reduced post -harvest losses 4.Access to market	No	Kshs.700 million	2023 2027	Yes – possibility of PPP

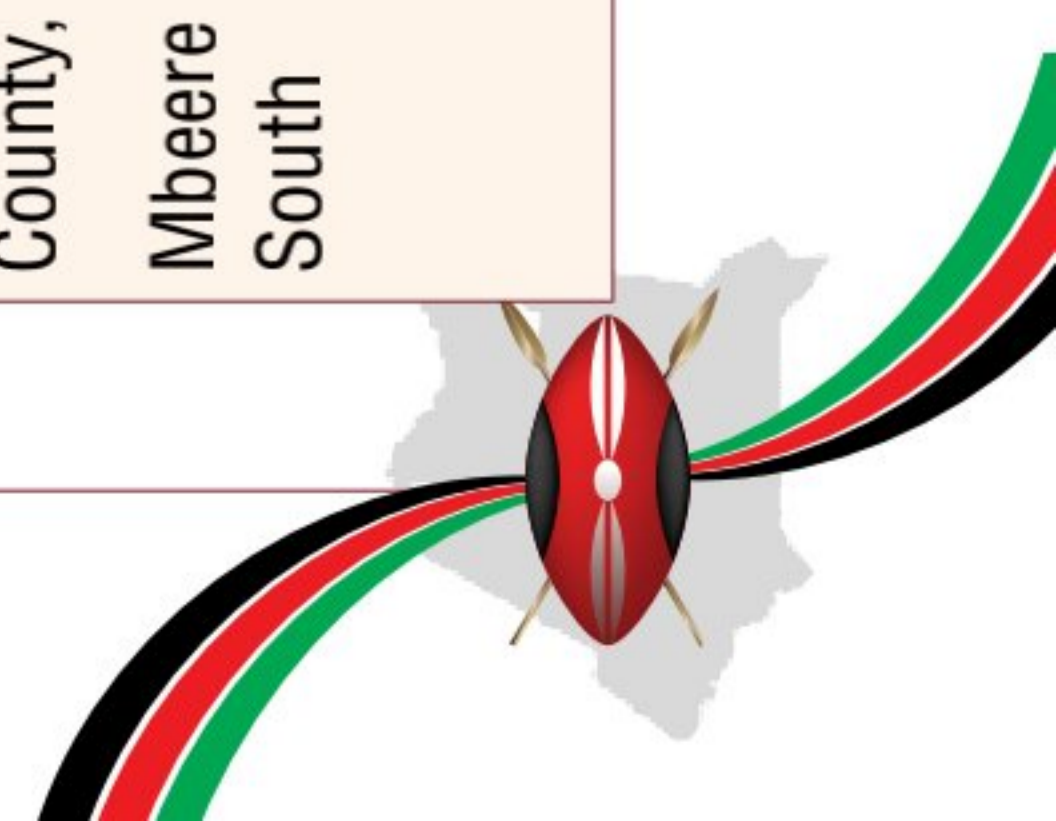

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Busia, Matayos Sub County	Busia Cross border Jumuiya Market (CBM)	Trade	To provide an affordable and secure market facility with preferential access and facilities for women and vulnerable traders to enable them to prosper.	CBM will be a self-contained state of the art market with special facilities to serve those persons who are abled differently. Water and environment	To improve solid waste management and promote circular economy	Identification and acquisition of 20-acre piece of land for establishment of the facility. Fencing of the facility site. Carrying out feasibility study, designs, ESIA report, and Construction of sanitary waste facility equipped with 2no cell disposal, leachate collection and treatment facilities.	20-acre piece of land acquire. Feasibility designs and ESIA reports 2 cell sanitary landfill facility	No	600 million	5 Years	Yes. County Government of Kericho and development partners.
Kiambu County Githunguri Subcounty	Proposed Waruhiu Aggregation Center	Trade & Agriculture	To facilitate economic growth, sustainability, and social development in Kiambu County.	This aggregation center would primarily function as a nexus for farmers to gather and sell their products, thereby facilitating crop aggregation at a centralized location.	Stimulate Local Economy: Provide Quality Control and Standardization Reduce Post-Harvest Losses: Promotion of Value Addition	NO	KES 150M	2023-2027	YES: Value chains have been identified which would potentially give rise to areas of partnership with the private sector.

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Kiambu County Kikuyu Sub-County	Proposed Industrial Parks at Nachu & Ndeiya	Trade	To stimulate economic growth by creating a concentrated area of industrial activity. The park aims to attract diverse industries, promote job creation, and enhance skill development among the local population. To serve as a platform for technological innovation.	The proposed industrial park is poised to be a significant hub of industry and innovation. The site offers excellent accessibility, robust infrastructure, and a surrounding workforce with diverse skills.	Creation of job opportunities, leading to improved living standards. Stimulate local economic activity, from direct industry-related growth to indirect impacts like increased demand for local goods and services. Enhance the County's infrastructure as connectivity and utilities are developed to support the park.	NO	KES 350M	2023-2027	YES: one of the possible areas where a PPP model can be explored is in the development of a Manufacturing and Training Facility. This initiative would serve as a catalyst for industrial growth and economic development within the region.

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Kiambu County Limuru Sub-County	Mining of diatomite	Water, Environment, Energy, Natural Resources	To establish a commercially viable mining operation that would bring significant investment returns while also contributing to the local economy through job creation, infrastructure development, and revenue generation for the local and national government.	Carbon dioxide gas is naturally present in the atmosphere. However, in some locations, carbon dioxide is found in underground reservoirs and can be “mined” or extracted by drilling wells into these reservoirs, similar to the process of natural gas extraction. The process of mining diatomite typically involves open-pit or surface mining. The overburden is removed to reveal the diatomite seam, which is then cut from the bed with heavy equipment, dried, and milled to create a powder.	Economic Growth: The establishment of mining operations would stimulate economic activity in the areas. Revenue Generation: Mining operations would generate revenue through the sale of the extracted carbon dioxide and diatomite. Also, it could provide substantial tax revenue for local and national governments through payment of royalties.	NO		2023-2027	YES: Through a PPP framework, the County offer the land for exploration and the investor agrees to pay a royalty to the County Government for the benefit of the communities within that area.

County & Sub-county	Project	Sector	Objective	Project description	Expected Impacts	Feasibility done	Cost	Completion period	Possibility of PPP
Kiambu County Thika Sub-County	Waste to energy Conversion at the Kang'oki Dumpsite	Water, Environment, Energy, Natural Resources	To generate green renewable energy from the waste deposited at this Site.	- This project involves converting the dumpsite into a renewable green energy generating center.	Establishment of an energy park with a main focus on generation of green energy (solar energy and wind). Establishment of wind farm and solar park	YES		2023-2027	YES: there exists immense potential to partner with the private sector to generate energy which can be added to the National Grid
